Where: HOTEL TRINITY INN SUITES
2000 Beach Street and IH30
Fort Worth, Texas 76103

Networking @ 6:30 pm
Meeting @ 7:00 pm

Featured speaker, Wilma Subra

Ms. Subra holds degrees in Microbiology and Chemistry from the University of Southwestern Louisiana. She has received the **MacArthur Fellowship "Genius" Award** from the MacArthur Foundation for helping ordinary citizens understand, cope with and combat environmental issues in their communities. She also was one of three finalists in the Environmental Category of the 2004 Volvo for Life Award.

Wilma started Subra Company, a chemistry lab and environmental consulting firm, in 1981. Her goal was to help citizens and communities understand exposure and health effects of toxins in their environment. "No one was looking out for community groups," Subra says about the early days of her company. Located in New Iberia, Louisiana, Subra Company offers technical assistance and provides the science. These services are needed for communities to get the attention of the industries responsible for the pollution, as well as the agencies responsible for protecting public health and the environment. "I've never had to turn anybody down," Subra says. "They may have to wait a few days, but if they ask, I will do what I can to help them."
